DNR Water Conservation Tips for your Lawns

Daily water application is unnecessary for healthy established turf. Before watering, verify that the grass needs watering:

Step on the grass. Do not water if the grass springs back. Water if the grass stays flattened. Efficient lawn watering: Water landscapes and lawns during the early morning, when it is still cool.

Lawns need about 1 inch of rain or water per week. Deep soaking is better for roots than frequent shallow watering. Water your lawn infrequently, one time or less per week, assuming no rainfall has occurred.

Cut grass 3 to 4 inches. Most homeowners think that the best time to water their lawn is in the evening. This isn't true, watering before dark lets the moisture rest too long on the grass blade and can result in fungal disease (like over watering does). Catch the rain. When the rain does come, saving rain water in rain barrels or cisterns is a great way to harvest rain water for irrigation. If the barrel is next to a garden, you can attach a soaker hose to the barrel and simply turn it on to let the water run. Grass also does quite well with only rainwater. According to Minnesota Extension, lawn irrigation is optional in Minnesota's climate. If you choose not to irrigate your lawn, it may be brown for several months. But when the temperature cools in the late summer, the grass will green up and grow again.

WATER CONSERVATION TIPS FOR CONSUMERS

The average single-family home uses approximately 5,000 gallons of water each month. There are things you can do to reduce your water use, and help lower your monthly bill.

Bathroom Toilets: Toilet flushing consumes over 25% of the daily household consumption of water, using about 5-7 gallons per flush.

Your toilet is not a wastebasket - don't use it to flush away cigarette butts or Kleenex.

Toilet dams save about two gallons per flush.

Put a few drops of food coloring in your tank. If colored water shows in the bowl without flushing, there's a leak and repairs are needed.

Bathing: Bathing usually consumes the second greatest quantity of water in the home.

A shower generally uses less water than a bath.

Do your showering and hair washing in one step.

Fill the tub 1/4 full. This is enough to cover an adult's body or float a child's toy.

Most showers can be fitted with a flow restrictor or low-volume head to conserve water.

Don't turn the shower on until you're ready to step in.

Sink: Don't leave water running while washing your face, shaving or brushing your teeth.

An electric razor uses less energy than it takes to heat up the water for razor shaving.

Kitchen and Laundry: More than 25% of daily household water use occurs in the kitchen and laundry with much of this water being wasted.

Remove frozen foods from freezer before you're ready to use them so you won't have to use running water to hasten thawing.

Always use lids on pots and pans.

Use the smallest amount of water possible in cooking to save both water and nutrients. Most frozen vegetables require about 1/2 to 1 cup of water, not half a saucepan.

Rather than letting the water run while peeling vegetables, rinse them briefly at the beginning and end of the chore.

Don't let the faucet run for a cold drink. Keep jugs of water cooling in the refrigerator.

When washing dishes by hand, use a stopper in the sink and don't rinse with running water.

Adding 1/4 to 1/2 cup of vinegar to your wash water cuts grease more readily than hot water alone.

Run your dishwasher only when you have a full load, since each load uses from 12 to 17 gallons of water.

Use the prewash, rinse-hold and scrub cycles of your dishwasher only when necessary.

If your washer has a variable load control, always adjust water levels to fit the size of the load. This saves both water and the energy needed to heat the extra hot water.

Run your washer when you have a full load.

Remember that in soft water clothes get cleaner and require less detergent and less rinse water.

When buying a new washing machine, look for models with water or energy-saving controls.

All around the House: Check every faucet for leaks. Just a slow drip can waste 15 or 20 gallons a day.

Use a broom, not the hose, to clean the garage, sidewalks, and driveway. Wash the car from a bucket. Use the hose only to rinse it off afterwards.

Insulate the hot water heater, pay special attention to the insulation qualities of the shell. Avoid buying a larger tank than is necessary for your needs.

BRUSH SITE UPDATE

Aggregate Industries has OPENED the Brush Pit at 16164 Hudson Blvd N, Lakeland, MN 55043. The Brush Day Schedule for the 2021 Season is as follows:

June 26th , July 17th, August 14th, September 18th & October 16th
